Title:

Producing plastic capable of crystallization from e.g. amorphous PET, includes a screening stage following crystallization

Inventor Name(s):

BORER C, MUELLER M, GLOECKNER F, BOHRER C, MULLER M, GLOCKNER F

Patent Assignee Name(s) and Code(s):

BUEHLER AG (BUHL)
GEBR BUEHLER AG (BUHL)
RIETER AUTOMATIK GMBH (RIET)

Derwent Primary Accession Number:
2001-274481 [76]

Abstract:

NOVELTY - Following a crystallization stage the plastic is screened.

USE - To make materials capable of crystallization e.g. polyesters or similar, especially polyethylene terephthalate, by melting, crystallization and post-condensation.

ADVANTAGE - A higher reactivity is achieved during crystallization and post-condensation in the solid phase. This results from the larger crystallites and improved crystalline surface structure achieved. Foreign solids can be reliably removed from the plastic material. Energy consumption is reduced.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for plant treating a polyester, especially PET. The plant includes a granulator, fluidized bed (4), and a shaft reactor (7). In the new design, a screen (5) follows the fluidized bed.

DESCRIPTION OF DRAWING(S) - A schematic flow diagram of the plant is included.

screen (5)

fluidized bed (4)

shaft reactor (7)

cutter (2)
